

RUCO
VINYL PRODUCTS

We use only the highest-grade materials in our fencing products.
QUALITY INGREDIENTS TO LAST A LIFETIME

- ✓ Built better to last longer with less weathering.
- ✓ Testing and retesting at every step.
- ✓ All products guaranteed in writing.
- ✓ Only the best compounds.

MADE IN THE USA

We have been manufacturing vinyl in Murfreesboro, Tennessee since 2017 utilizing only the highest quality micro-ingredients from established US chemical manufacturers.

HIGH-HEAT STABILIZATION

Quality heat stabilizers help our products withstand UV exposure while preserving the appearance, strength, elasticity and performance of our fence profiles.

HIGH-GRADE TiO₂

Our proprietary PVC formula has been designed and tested to have the right amounts of high-grade TiO₂ to fight weathering and keeps colors consistent.

NON-FERROUS PIGMENTS

Using non-ferrous pigments made by leading manufacturers provides us with consistent color output that resists weathering over time and batch-to-batch consistency.

LESS WEATHERING

Our fences meet or exceed industry established ASTM standards and are continually tested in both laboratory and real-world conditions.

TOP-QUALITY RESINS

We use only prime-grade resin in our commitment to building only the highest quality products.

EXCEEDING INDUSTRY STANDARDS

RUCO Vinyl Products are manufactured to avoid abnormal peeling, rotting, blistering, rusting, flaking, and corroding. Our blend of raw materials create fences that exceed industry standards in durability and strength.

TESTED

We constantly monitor and test quality at every stage. This includes in-house inspection at our facility. If something does not meet our high standards, it is immediately rejected.

GUARANTEED

RUCO Vinyl Products offer an industry-leading Limited Lifetime Warranty that is transferrable by the original purchaser to future owners.

Rail Lock Feature:

All posts sold by RUCO Vinyl Products are accompanied with a Rail Lock. Rail Locks greatly improve the wind load capability of vinyl fences. This simple yet ingenious device, used in conjunction with screwing the "U-channel" and locking pickets provides the installer and the homeowner peace of mind on those stormy days. There is nothing worse than being away from home when a storm blows through and worrying about your pet escaping through a blown out section.
